The periodic table is not just a typical wall decoration in science lecture rooms, it is an exceptional tool for scientists to understand, and even predict, the properties of the elements. 2019 marks 150 years since it was founded and the United Nations General Assembly proclaimed this year as the International Year of the Periodic Table and it should be celebrated all over the world. The Nelson Mandela University's Department of Chemistry will be taking part in the celebrations through public lectures, chemistry demonstration events and through social media to create awareness. 2019 is also the International Year of Indigenous Languages, and the Department of Chemistry will collaborate with the School of Languages experts at NMU to coin African names (particularly in IsiXhosa) for the elements of the Periodic Table. Some elements are named after places of discovery as well as names of scientists or institutions that discovered them, but some are named after the characteristics of the elements, and the naming project will target such elements. The full programme appears on the next page:
